Allowing Open Book Using Respondus:

1) Click on Lockdown Browser within the course and go to the Dashboard. Click on the exam Settings.

2) Click Advanced Settings under the section for Lockdown Browser Settings:
3) You will need to check Allow Access to specific external web domains. You will enter the domain website for the textbook.

To add a valid site, such as a publisher's e-book, the instructor must first add the web links to the exam itself, usually the first question. The link cannot be in any exam instructions outside the active exam. The web links must also be configured to "open in a new window or new tab", not the "same window".

As an example, to access Amazon's Kindle Cloud Reader, the instructor would enter "read.amazon.com" along with "www.amazon.com/ap/signin" separated by commas into the "Allow access to specific external web domains" listing.
